

## Seminar des SFB 647

### ZEIT:

2.2.2010, 16:00 Uhr - 19:00 Uhr

### ORT:

Humboldt-Universität zu Berlin  
Auditorium der Universitätsbibliothek  
Jacob-und-Wilhelm-Grimm-Zentrum  
Geschwister-Scholl-Straße 1/3  
10117 Berlin

### PROGRAMM:

16:00 - 17:00 Vollversammlung

17:00 - 17:30 Kaffeepause

17:30 - 18:30 **Dr. Jörn Müller**

### **A Hodge-type Theorem for Manifold with fibred cusp metric**

Manifolds with fibration structure on the boundary arise frequently in interesting problems in geometry and mathematical physics, e.g. in adiabatic limit methods and as Hawking's gravitational instantons. Of particular interest are manifolds with fibred cusp metrics; these can be considered as a geometrical generalization of locally symmetric spaces of  $Q$ -rank one at infinity.

We discuss a Hodge-type theorem for this class of Riemannian manifolds, i.e. we find harmonic representatives of the de Rham cohomology. Similar to the situation of locally symmetric spaces, these representatives are computed as special values or residues of generalized eigenforms of the Hodge-Laplace operator.
