

SFB-Vollversammlung und SFB-Seminar

ZEIT:

4.2.2013, 13:00 Uhr - 17:15 Uhr

ORT:

Universität Potsdam
Audimax
Am Neuen Palais 10
14469 Potsdam

PROGRAMM:

13:00 - 13:45 SFB-Vollversammlung

13:45 - 14:15 **Dr. Batu Güneysu (HU)**

Path integrals from Brownian motion

14:15 - 14:45 Kaffeepause

14:45 - 15:45 **Prof. Dr. Peter Teichner (MPI Bonn)**

Path integrals via algebraic topology?

We'll discuss the structural analogies between path integrals and push-forwards in certain generalized cohomology theories. As a consequence, we propose a new way of rigorously defining the 2-dimensional super symmetric Sigma model, at least up to deformation.

This is a report on joint work with Stephan Stolz.

15:45 - 16:15 Kaffeepause

16:15 - 17:15 **Dr. Sonia Mazzucchi (Trient, Italy)**

Feynman Path Integrals as Infinite Dimensional Oscillatory Integrals

Since their introduction in the 40s Feynman path integrals have

represented a suggestive and powerful tool for the description of the dynamics of several quantum systems. On the other hand, it is commonly believed that they are ill defined from a mathematical point of view and represent just an heuristic computational tool. In this talk I shall give an overview of the possible rigorous mathematical definitions of Feynman path integrals, focusing on the infinite dimensional oscillatory integrals , a generalization of classical oscillatory integrals to the case where the integration is performed on an infinite dimensional real separable Hilbert space.
